SpeedLine

Enterprise Management
Centralized POS Control

See More Clearly Into Your Restaurant Business

SpeedLine

Features to Love

Connect to Head Office Systems

Whether you own one small pizza shop or a few hundred pizzerias, the scalable design of a SpeedLine system can handle your needs as you grow.

Standardize for efficiency while easily managing the differences with a flexible enterprise POS.

Use SpeedLink Enterprise to connect the POS systems in your restaurants with your accounting, marketing, and business intelligence systems at head office.

If you have your own above store accounting system, you can pull transactional data from restaurants to head office with SpeedLink Enterprise for centralized payroll & accounting.
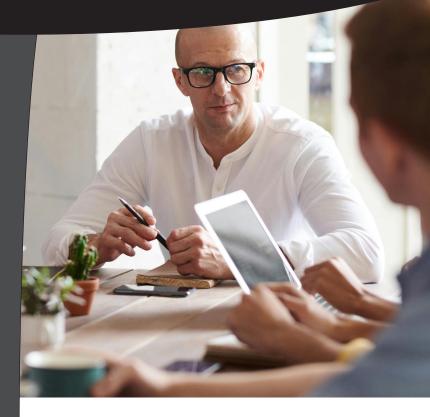

Certify Your Team

For multi-unit restaurant companies, certifying installers in-house can reduce the cost of a multi-unit rollout and give you increased flexibility in scheduling POS installations and training.

After completing the SpeedLine certification program, SpeedLine Certified Technicians are certified to install SpeedLine and provide training for stores within your organization.

The SpeedLine Certified Technician Program is customized for your operation.

Centralized Control

Administer all of your Restaurants from Head Office

With SpeedLink Enterprise, you obtain secure remote access to automatically pull sales, labor, and inventory data from each restaurant directly to head office.

Push POS coupons, price changes, schedules, and setting updates down to stores. Automatically run and distribute reports, and ultimately shrink your administrative costs.

Easily manage and troubleshoot settings for a particular store, or a Store Group. Save a copy of the complete point of sale configuration for each region or location as a profile and instantly switch profiles to manage and test the impact of setting changes.

Menu Management

## Tools for Multi-Store Operations

Manage your menus with SpeedLink Enterprise (for SpeedLine 8 users) and SpeedLine Portal (for SpeedLine+ users) at store level, regionally or chain-wide. Create a "master" menu to standardize offerings while allowing for regional or store-level differences in items, coupons, prices, and more. Restrict menu changes to head office, or allow individual locations to create their own coupons.

Have holiday or seasonal specials? Prepare menus in advance, and set effective dates. Your new offer will appear only at selected locations during the effective dates.

SpeedDine, SpeedLine's own integrated online ordering platform, also lets you maintain a single master menu while varying online offerings for stores at the individual or group level. And since online prices and coupons are sychronized with the store, they always match.

SpeedLink Reporter

As an alternative to SpeedLine's cloud reporting, use SpeedLink Reporter to produce, schedule, and share a wide range of reports with users across multiple regions and locations. Or create your own reports using report writing tools such as Cognos or Crystal Reports.

Reporting & Analytics

Power to Make Informed Decisions

A subscription to Analytics takes the guesswork out of managing your pizza chain.

Near Real-Time Data: Make confident decisions based on current conditions with Cloud Reporting & Analytics. Access graphical dashboards and report tables from any browser. Add a shortcut to your mobile device to check your latest numbers with a few taps.

Dashboards: Analytics includes a full set of dashboards that summarize key metrics in chart format for easy at-a-glance analysis, plus a set of more conventional reports in tabular format. Compare performance between locations, view a subset, drill down to just one store, or see chain wide totals and averages. View current and previous time periods on the same chart, so you can gauge business growth.

Analyze Data: Analytics includes advanced tools that can help you analyze your data. Apply an overall trend line to make it easier to interpret charts with a lot of variation, forecast future trends on graphs with a time dimension, and jump from a chart or key value to its related report with one click.

Download Dashboards: Download any of your dashboards in PDF or image format to share with others, or save it for later reference. Download reports as CSV, PDF, or image files.

Alerts and Email Reports: Set up Alerts to automatically trigger email notifications when thresholds are reached for key metrics (e.g., voided tickets, late deliveries), and ensure recurring email report subscriptions are in place to provide regular visibility in addition to real-time alerts.
